

ENG The T-FIX[®]™ system

T-Fix[®]™ displays are fast and easy to assemble. This lightweight standing aluminium structure is constructed using the T-Fix[®]™ connectors. The T-Fix[®]™ system is available in 5 different configurations. The standard colour is anodized silver, but both tubes and corners are available in different colours.

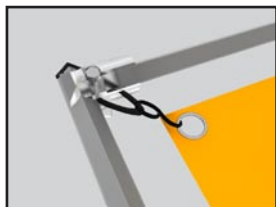

Benefits:

- Easy assembly & disassembly
- Lightweight (for shipment & transport)
- All possible sizes (A4 - 6m²)
- Suited for all print-media, both single-sided and double-sided posters

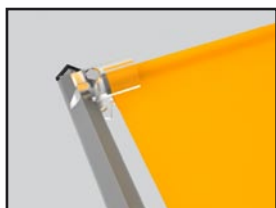

T-FIX[®]™ RSC1

Suited for small to medium sized posters (0,5 - 2m²) (130-200g/m²) that need to be changed frequently. The Corners are equipped with a spring and clip-it system or a metal clamp with a protective cover.

T-FIX[®]™ BEL1

Suited for banner prints (bigger than 2m²) with eyelets (max. Φ 1cm). The banner is suspended using a rubber band and hook. The Banner can also be attached directly to the T-Fix[®]™ connector so that the structure becomes invisible.

T-FIX[®]™ RTZ1

Suited for medium to large sized posters printed on textile, back-lite or PVC. The border of the poster has to be sewn together so that it can be attached to the top and bottom tubes for assembly.

T-FIX[®]™ TRV2

Suited for 1 or 2 medium to large sized posters. The poster is attached to the horizontal T-profile with a self-adhesive tape. A second poster can be attached using the same method on the backside of the T-profile (recto-verso).

T-FIX[®]™ TPP2

Suited for 1 or 2 Polystyrene or plexi panels with a maximum thickness of 5mm. This system is identical to the TRV2, but uses stronger self-adhesive tape. Standard dimensions voor panels: 70x100cm, 100x140cm (portrait or landscape). Other sizes on request.

Square or round footstand also available.
